

Set of Four Electromechanical Leviathan Mobile Columns

GARAGE EQUIPMENT
since 1922

Part No.: SF/9455
*See overleaf for
more information*

- Range of lifting capacities from 5.5 - 10t per column
- Flexible control system allowing expansion of column set
- Permanently safe load & safety nut design
- Electronic synchronisation of columns
- Operating controls on all columns

Set of Four Electromechanical Leviathan Mobile Columns

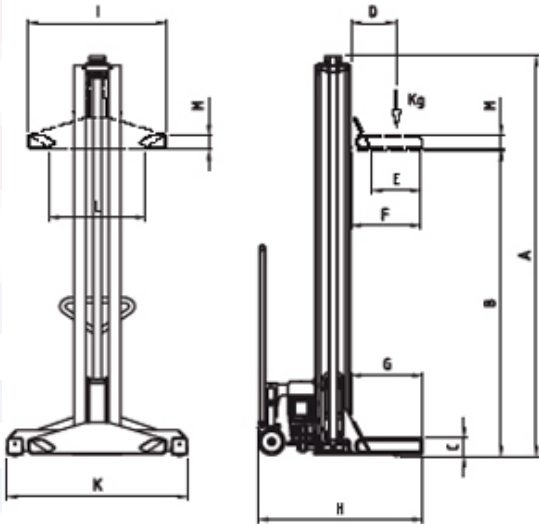

GARAGE EQUIPMENT
since 1922

→ About the SF/9455 range

The Leviathan range of electromechanical mobile lifting columns represent the most versatile and economic method of lifting commercial vehicles, coaches and buses for under-body inspection and repairs. The range starts with a lifting capacity of 5.5t per column with sets of 4, 6 or 8 columns. Each lifting carriage is raised via a Nylatron lifting nut mounted to a cold rolled steel screw operated via a 3ph motor controlled via individual PLC units which also continuously synchronise each column, ensuring that all carriages remain level +/-5mm throughout the lifting cycle. Columns are manoeuvred into position using the integral trolley system.

The Leviathan column can be used on any suitable concrete floor; power supply is 3ph 400V 50Hz via a fused isolator. Provision of the power supply cable from isolator to control column is the clients responsibility.
